

# AI-Powered Forensic Investigation Report

Investigation ID: INV-0013  
Case Name: Escalated from Protection Mode — www.google.com  
Generated: 2026-09-09 14:17:12  
Overall Risk: 5.0 (LOW)

## Executive Summary

This report summarizes the automated, AI-assisted analysis performed for investigation INV-0013 ('Escalated from Protection Mode — www.google.com'). The platform analyzed 1 email item(s), 0 network flow record(s), 0 document(s) (including identity consistency checks), 0 geolocation lookup(s), and correlated 0 threat-intelligence indicator match(es). The overall prototype risk score is 5.0/100, classified as LOW.

## Email Analysis

| Sender | Subject                   | Classification | Risk |
|--------|---------------------------|----------------|------|
| —      | URL Check: www.google.com | UNKNOWN        | 5.0  |

## Network Analysis

No network evidence recorded for this investigation.

## Identity & Document Analysis

No document evidence recorded for this investigation.

## Geolocation Analysis

No geolocation evidence recorded for this investigation.

## Threat Intelligence

No threat intelligence matches recorded.

## Evidence Relationships

| Source                           | Relationship       | Target                                              |
|----------------------------------|--------------------|-----------------------------------------------------|
| Investigation #13                | has evidence       | Email: URL Check: www.google.com                    |
| Email: URL Check: www.google.com | contains indicator | Indicator: No suspicious patterns or threat intelli |

These relationships describe how the collected evidence connects (e.g. an email leading to a sender domain matched against threat intelligence) — they are derived directly from stored evidence, not inferred beyond it.

## Related Activity / Campaign Analysis

No shared indicators were found with any other investigation in the system at the time this report was generated.

## Forensic Timeline

| Time                | Category | Event                                                      |
|---------------------|----------|------------------------------------------------------------|
| 2026-09-09 14:12:55 | Email    | Email analyzed — sender: unknown → classification: UNKNOWN |

## Risk Factors & AI Explanation

Overall prototype risk score: 5/100 (LOW).

Key Risk Indicators:

[EMAIL] No suspicious patterns or threat intelligence matches found.

Note: This is a prototype risk assessment based on heuristic and machine-learning signals. It is intended for educational/demonstration purposes and does not constitute a definitive determination of malicious intent, fraud, or identity.

## Recommended Next Steps

- Request email server / firewall logs for the sender's connection to corroborate the email evidence with network-level indicators.

*Why: Email evidence is present but no network evidence has been added to this case.*

## Disclaimer

This report was generated by an educational/research prototype AI system. Risk scores, classifications, and screening results are heuristic and machine-learning based estimates, not definitive findings of fraud, malicious intent, or identity. IP geolocation is approximate. Threat intelligence matches are against a local synthetic demo dataset. This report is not a substitute for professional forensic, legal, or security investigation and should not be used as the sole basis for decisions affecting real individuals or systems.
