

AI-Powered Forensic Investigation Report

Investigation ID: INV-0049
Case Name: Escalated from Protection Mode — <http://secure-login-verify-account.example.com/urg>
Generated: 2026-09-11 13:51:50
Overall Risk: 35.0 (MEDIUM)

Executive Summary

This report summarizes the automated, AI-assisted analysis performed for investigation INV-0049 ('Escalated from Protection Mode — <http://secure-login-verify-account.example.com/urg>'). The platform analyzed 1 email item(s), 0 network flow record(s), 0 document(s) (including identity consistency checks), 0 geolocation lookup(s), and correlated 0 threat-intelligence indicator match(es). The overall prototype risk score is 35.0/100, classified as MEDIUM.

Email Analysis

Sender	Subject	Classification	Risk
—	URL Check: http://secure-login-verify-account.example.com/urgent-password-reset	UNKNOWN	35.0

Network Analysis

No network evidence recorded for this investigation.

Identity & Document Analysis

No document evidence recorded for this investigation.

Geolocation Analysis

No geolocation evidence recorded for this investigation.

Threat Intelligence

No threat intelligence matches recorded.

Evidence Relationships

Source	Relationship	Target
Investigation #49	has evidence	Email: URL Check: http://secure-login-verify-account.example.com/urgent-password-reset
Email: URL Check: http://secure-login-verify-account.example.com/urgent-password-reset	contains indicator	Indicator: Domain contains an unusually high number
Email: URL Check: http://secure-login-verify-account.example.com/urgent-password-reset	contains indicator	Indicator: Domain uses suspicious keyword patterns
Email: URL Check: http://secure-login-verify-account.example.com/urgent-password-reset	contains indicator	Indicator: URL does not use HTTPS

These relationships describe how the collected evidence connects (e.g. an email leading to a sender domain matched against threat intelligence) — they are derived directly from stored evidence, not inferred beyond it.

Related Activity / Campaign Analysis

No shared indicators were found with any other investigation in the system at the time this report was generated.

Forensic Timeline

Time	Category	Event
2026-09-11 13:48:32	Email	Email analyzed — sender: unknown → classification: UNKNOWN

Risk Factors & AI Explanation

Overall prototype risk score: 35/100 (MEDIUM).

Key Risk Indicators:

[EMAIL] Domain contains an unusually high number of hyphens

[EMAIL] Domain uses suspicious keyword patterns common in phishing

[EMAIL] URL does not use HTTPS

Note: This is a prototype risk assessment based on heuristic and machine-learning signals. It is intended for educational/demonstration purposes and does not constitute a definitive determination of malicious intent, fraud, or identity.

Recommended Next Steps

- Request email server / firewall logs for the sender's connection to corroborate the email evidence with network-level indicators.

Why: Email evidence is present but no network evidence has been added to this case.

Disclaimer

This report was generated by an educational/research prototype AI system. Risk scores, classifications, and screening results are heuristic and machine-learning based estimates, not definitive findings of fraud, malicious intent, or identity. IP geolocation is approximate. Threat intelligence matches are against a local synthetic demo dataset. This report is not a substitute for professional forensic, legal, or security investigation and should not be used as the sole basis for decisions affecting real individuals or systems.
